LOCK RELEASE MOD.PN-512 (panic)

DESCRIPTION

Serie P
PANIC. Antipanic Series designed to adapt to panic bar lock deadbolt. Surface mounted and reversible.

Reversible (Right DIN or Left DIN).
Lets you open the door from right and left.
Symmetrical.
Allows to change hands, maintaining the body symmetry.

DIN STANDARD
establishes the direction the door opens and designates the type of lock release installed.
Looking at the door from the side with the hinges visible:

- If the hinges are to the left of the observer, it is a left DIN lock release.
- If the hinges are on the observer's right, it is a right DIN.

Operating type.
There are several types of door lock release mechanisms depending on the type of operation needed.
N-512 Inverted type 12Vdc (Inverted Operation and 12 Vdc activation)
The door release is automatically unlocked when the 12 Vdc pulse stops.
