

F05192

MARINE WIEGAND KEYPAD READER

DESCRIPTION

MARINE is the Fermax IP54 IK09 vandal-proof panel. It is made of 2.5 mm thick stainless steel. Type AISI 316L steel.
Marine is the perfect choice for installation in places with extreme weather conditions or in hazardous environments, humid or corrosive climates.

This Marine plate includes the flush box. If a surface box is desired, it must be ordered separately. The surface box includes a protective visor.

Digital keypad allows the door to be opened by entering a 4 to 6 digit code previously programmed in the central controller, which is required for operation.

The wiegand keypads provide the access control installation with anti-sabotage security as they do not incorporate the door opening mechanism or the exit button connection. These functions are supported by the external controller. They can be used with door controllers using the Wiegand-8 or 4-bit burst protocols.

Centralised access control system. For installations requiring PC-based code switching or event logging. Requires an external centralised controller such as AC-MAX or WIEGAND 1 DOOR WIFI MINI CONTROLLER (Ref. 5193). Depending on the controller where this wiegand keypad is connected, it must be configured in 4 or 8 bits burst.

TECHNICAL SPECIFICATIONS

INSTALLATION	
Mounting	Flush,Surface (Includes flush box)
ENVIRONMENTAL	
Environmental protection rating (IP)	54
MECHANICAL	
Product dimensions (height x width x depth) (mm)	180 x 150 x 35
Impact resistance rating (IK)	9
KEYBOARD FEATURES	
Length of codes	6

ADDITIONAL DETAILS	
Weight (kg)	1.506654
Packaging measurements (height x width x depth) cm	21x15,8x7,8
EAN	8424299051925
